

 **Klein Instruments**
XL Multi-Probe Array
for Klein Colorimeters
XL-MPA

The Klein XL Multi-Probe Array is a heavy duty colorimeter holder for performing automated or semi-automated colorimetry measurements. This array, with up to nine colorimeters, will measure up to nine points on a display. Then every display of that size will be measured consistently and efficiently. Adjusting the array to a new display size is easy and our software already has multi-probe array capability.

Precise, accurate fixturing of measurement equipment is critical for getting consistent results. The XL array is a heavy duty stable platform that ensures precision. The XL-MPA positions the K-10 colorimeters precisely perpendicular to the display every time. The crossbar connects to the uprights and are indexed by position pins. Repositioning is easy by only a single operator.

- Supports up to 9 Klein Colorimeters
- Can measure displays up to 90" (55"V x 72"H)
- Heavy Duty Anodized Aluminum Construction
- Teflon coated holders for ease of sliding
- Easy to adjust
- Weight: 89 lbs.
- Other configurations available on request
